

Scans simplify inventory reporting

As the year-end approaches, it is essential to make sure inventories are accurate. With BoviSync, farms can scan animals quickly and easily with the mobile app. Reporting is simple, too. Every cow scanned will receive a timestamp of the last scan (ScanDTM – Most Recent EID Scan) and the technician doing the scanning (ScanTECH – Most Recent EID Scan Technician). We can also use the report item of "SeenDTM" – the most recent Scan OR Entry.

Here are some useful scanning reports:

<https://bovisync.farm/report/8ZXZB> Not seen in Past week

<https://bovisync.farm/report/LVF8QM> Seen Today

BoviSync simplifies data management and improves labor productivity

Listen to founder Dr. David Cook on BoviNews (ironically not affiliated with BoviSync).

https://bovisync.com/bovinews_enhance_labor/

David explains how BoviSync can make a difference in labor management and onboarding new herd management employees. Do you need help with setting up BoviSync? Have a question about a task on your dairy? Schedule an onboarding meeting with BoviSync.
